Introduction

Upgrading your version of LightSpeed 3.0 is a process that involves the installation of LightSpeed Server as well as the replacement of the LightSpeed client on each computer that logs in.

Overview

- 1 Go to <http://www.xsilva.com/en/downloads.html> from your LightSpeed server computer.
- 2 Click *Upgrade to LightSpeed 3.x*.
- 3 Once the LightSpeed Installer .dmg file has downloaded, it will automatically open to the Installer window.
- 4 Double-click the *Install LightSpeed Server* icon. Click through the steps as indicated. Restart when instructed.
- 5 Re-open the .dmg file and drag the LightSpeed client to your *Applications* folder.
- 6 Launch LightSpeed and log in. LightSpeed should remember the location of your database.
- 7 Distribute the LightSpeed client to each client computer logging into LightSpeed. Please see the *Networking* document for instructions on logging into LightSpeed.
