Introduction

Current users of the LightSpeed Web Store 1.3 with a current support subscription have the opportunity to upgrade free of charge to the new Web Store 2.0, a complete rewrite of the Web Store product that includes an array of valuable web cart features not previously available.

Because the new version of Web Store is a complete rewrite, with an entirely new architecture, there are varying degrees of compatibility between the two versions regarding the transition of customization, which can be divided into two major categories: design and functionality extensions.

The purpose of this document is to offer a technically-slanted explanation of what is possible to transition from Web Store 1.3 to 2.0. It is primarily intended for users with more than a basic understanding of PHP and CSS modification who have modified Web Store 1.3 beyond the basic branding possible in the Web Store setup panel.

For a complete explanation of Web Store 2.0 installation, please see the *Web Store 2.0 Installation Guide*. If you are **not** hosting with Xsilva, be sure that you do not **overwrite** your Web Store 1.3 files on your web host.

Basic Web Store 1.3 Customization Transition

For users who have used Web Store 1.3 templates with minimal customization (ie. addition of header and subheader graphics in the Web Store setup panel), minimal customization will be required for the transition to Web Store 2.0. Once Web Store 2.0 is installed, and the

web host is configured, upload your Product information to the store the same way you have done in 1.3.

- 1 Select the Products you wish to sell on the Web Store by checking the *Sell on Web Store* option in the *Web* tab of the Product card. If transitioning from 1.3 to 2.0, these Products should already have this checkbox selected.
- 2 If you have not already done so, configure your *Web Categories* and *Web Keywords*. If they are already configured, no modification is necessary to maintain the same structure in the new Web Store.
- 3 Finish configuring the Web Store 2.0 Admin panel as outlined in the *Web Store 2.0* PDF document on the training page of xsilva.com.
- 4 Click the *Update Store* button of the Web Store setup panel under the *Tools* menu. Alternately, you can configure the upload/update of the Web Store to happen on a schedule in the *Setup* tab of the Web Store setup panel.
- 5 When the Web Store has been updated, confirm that your categories and product information has been maintained. Contact Xsilva Support with any questions.

Web Store 2.0 allows the addition of a header graphic for your corporate branding in the Web Store Admin panel (**Tools > Web Store > Admin Panel > Appearance > Header Image**). While the resolution of the graphic is suggested to be no larger than 760x115 pixels, you can add images of other dimensions by modifying your template CSS file. To add a header image, outline the path on the web host which contains the image you wish to add.

Subheader images are not required in Web Store 2.0.

Advanced Web Store 1.3 Customization Transition

Advanced customization for Web Store 1.3 can be divided into two categories - **design** and **functionality extension**.

Regarding **functionality extension**, many features that may have been added as customization options to Web Store 1.3 may be features that have been included with the feature set of Web Store 2.0. Review the feature set of Web Store 2.0 to verify if the feature(s) you have customized to 1.3 are now standard in 2.0. However, because the architecture of Web Store is completely different between versions, the addition of existing functionality to 1.3 may have to be re-

A WORD ABOUT HOSTING

With Web Store 2.0, Xsilva offers hosting packages that make it even easier for you to have your Web Store installed and maintained. Contact our sales department for more information.

However, if your web host is not Xsilva, you must be sure that it meets the following **requirements**:

Minimum PHP version 5.2.4

Apache 2.0

MySQL 5

PHP extensions/compilation flags required:

```
--enable-gd-native-ttf
--enable-mbstring
--enable-soap
--enable-sockets (Emailing is done via SMTP socket)
--enable-zend-multibyte
--with-curl=/opt/curlssl/
--with-gd
--with-jpeg
--with-png
--with-ttf
--with-libxml
--with-mcrypt
--with-mhash
--with-mysql
--with-mysqli
--with-xmlrpc
```

Zend Optimizer 3.3.3 or higher (available as a free download from zend.com)

A valid SMTP host

.htaccess enabled for Search Engine Optimization and db_backup security (if applicable)

written for 2.0, and, in some cases, may not be possible to add to 2.0.

Some **design** elements that have been customized in 1.3 may be able to be transitioned to 2.0, depending on the complexity of your customization.

Although you may need to make further adjustments, the basic elements of the CSS file of your Web Store 1.3 can be transitioned to the CSS file of your Web Store 2.0 using the following steps:

If you have renamed `defaults.css`, please replace "defaults" in these steps with your filename.

- 1 Log in to your Web Store 1.3 installation via FTP.
- 2 Backup "templates/<nameoftemplate>/default.css" to your desktop.
- 3 Backup "templates/<nameoftemplate>/css/images directory" to your desktop, and backup "templates/<nameoftemplate>/images directory" to your desktop.
- 4 Log in to your Web Store 2.0 installation via FTP.
- 5 Inside the "templates" directory, duplicate either the "deluxe" directory or the "basic" directory.
- 6 Rename the duplicated directory to a custom name of your choice in the format of **yourdirectoryname** (no spaces)
- 7 Upload "default.css" from your desktop to "yourdirectoryname/css/".
- 8 Upload the contents of the "images" directory from your desktop to "yourdirectoryname/css/images/"
 - If prompted, replace any files requested.
- 9 Open "yourdirectoryname/index.tpl.php", and after line 76 add

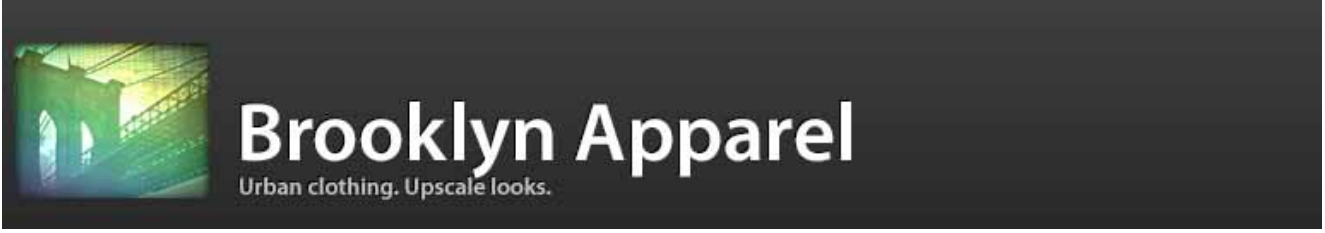

```
<link rel="stylesheet" type="text/css"
href="<?= templateNamed('css') ; ?>/default.css"
/>
```
- 10 Save file.
- 11 Enter the path of your header image from Web Store 1.3 via the Web Store 2 Admin Panel.
- 12 Select your custom template in the Web Store 2 Admin panel at *Configuration > Appearance > Template*.

Naming Convention

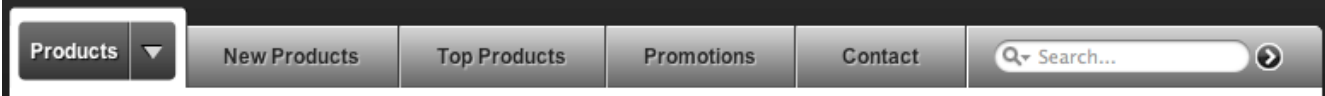

The naming convention of the CSS file is also outlined below, in a short guide to the IDs and Classes that control the layout of Web Store 2.0.

EX: ID Example: #example
Class Example: .example
* anything that follows the ID or class
Example: #example .subexample
Example: .example_subexample
Example: #example p
